

BRICK SLIPS

ABOUT US

We, the ABC Clinker Group, are a family-owned business in the brick and tile industry in Germany and can look back on around 130 years of experience. Today, our ABC Clinker Group is in the fifth generation and manufactures various brick products at six locations in Germany. Our product portfolio includes facing bricks, brick slips, ceramic facades, clay pavers, clinker roof tiles and floor ceramics.

SUSTAINABILITY

We produce sustainable natural building materials as environmentally friendly as possible. For this reason, we focus on low energy consumption in production with gentle, efficient use of resources and low material consumption. The natural slate clay of the Tecklenburger Land forms the basic material of our ABC products - a valuable, genuine natural product!

VISIT OUR SHOWROOM „RINGOFEN“ IN HÖRSTEL

In our showroom, the Ringofen, Dornierstr. 11 in Hörstel, we offer you numerous suggestions and various possibilities for your house construction. For an individual consultation we are available Monday to Friday from 08.30 am to 05.30 pm and Saturday from 09.00 am to 01.00 pm. For an appointment, you can reach us by phone at +49 (0) 54 59 / 93 43 11 or by e-mail at ausstellung@abc-clinker.de.

Features of our products

Frost-resistant

Environmentally friendly

Water absorption $\leq 6\%$

Colourfast

Weatherproof

Fire behavior: euroclass A1

Standardized

ETICS suitable

Graffiti removable

Environmentally friendly
through 150 years
of service life –
confirmed by an
independent EPD.

Construction of thermal insulation

We recommend having the facade renovation carried out by a specialist company.
In addition, observe the manufacturer's processing instructions.

Processing ETIC-System

1

Application of insulation panels to the facade

2

Installation of a reinforcement layer

3

Fastening of insulation panels with special anchors

4

Adhesive application

5

Application of adhesive to the slip (buttering-floating procedure)

6

Setting the slip in the adhesive

7

If the adhesive is set and the slip facade is completely dry, grouting can begin. There are two possibilities here:
1. Smooth clinker slips can be grouted using a sponging procedure. The excess joint mortar is neatly washed off with a sponge float.
2. Classic grouting with dry grouting mortar, jointing iron and hawk. This procedure is suitable for all clinker slips.

Standard clinker cleaner should be used for cleaning if the installed areas are contaminated with mortar. In every case, the effectiveness and suitability of this cleaner must be tested on the building in advance. Remmers Klinkerreiniger Combi WR, diluted 1 : 15 has produced good results.

Application of adhesive to the slip (buttering-floating procedure)

ABC-Graffiti-Remover

ABC-CLINKERS ARE GRAFFITI REMOVABLE

Graffiti can be easily removed from ABC-Clinkers with ABC-Graffiti-Remover. It has become part of the appearance of our cities and villages, but it is rarely welcome. For one thing, it seldom meets the aesthetic taste of the house-wall owners, and for another, it is usually very cost-intensive to remove. Although the spraying, which is usually carried out at night, is hardly able to be prevented, one can at least ensure that it disappears as quickly as it came about through one’s choice of building material for the outer wall.

Thanks to the extremely high firing temperatures during the manufacturing process, ABC clinker facing bricks have a surface that reliably prevents the ingress of moisture of all kinds – that goes for both rain and paint. This means that graffiti remains on the surface and can be removed quickly and easily with the ABC graffiti remover, and what’s more, without leading residues. A façade with clinker facing bricks is not only beautiful and functional, but also robust and impervious.
