

FACING CLINKER & BRICKS

ABOUT US

We, the ABC Klinker Group, are a family-owned business in the brick and tile industry in Germany and can look back on around 130 years of experience. Today, our ABC Klinker Group is in the fifth generation and manufactures various brick products at six locations in Germany. Our product portfolio includes facing bricks, brick slips, ceramic facades, clay pavers, clinker roof tiles and floor ceramics.

SUSTAINABILITY

We produce sustainable natural building materials as environmentally friendly as possible. For this reason, we focus on low energy consumption in production with gentle, efficient use of resources and low material consumption. The natural slate clay of the Tecklenburger Land forms the basic material of our ABC products - a valuable, genuine natural product!

VISIT OUR SHOWROOM „RINGOFEN“ IN HÖRSTEL

In our showroom, the Ringofen, Dornierstr. 11 in Hörstel, we offer you numerous suggestions and various possibilities for your house construction. For an individual consultation we are available Monday to Friday from 08.30 am to 05.30 pm and Saturday from 09.00 am to 01.00 pm. For an appointment, you can reach us by phone at +49 (0) 54 59 / 93 43 11 or by e-mail at ausstellung@abc-clinker.de.

Shaped bricks

ABC-special shaped bricks

In addition to the common formats produced by us and the shadow bricks and cusp clinkers shown on double page 60 / 61, we also produce other special shape clinkers, partly by hand. These special-shaped bricks, with their convex or concave curves, with their cants and additional corners or angles, not only make it easy to master difficult architectural details such as window parapets or plinths; they also open up additional dimensions of the facade design.

ABC-Graffiti-Remover

ABC-CLINKERS ARE GRAFFITI REMOVABLE

Graffiti can be easily removed from ABC-Clinkers with ABC-Graffiti-Remover. It has become part of the appearance of our cities and villages, but it is rarely welcome. For one thing, it seldom meets the aesthetic taste of the house-wall owners, and for another, it is usually very cost-intensive to remove. Although the spraying, which is usually carried out at night, is hardly able to be prevented, one can at least ensure that it disappears as quickly as it came about through one’s choice of building material for the outer wall.

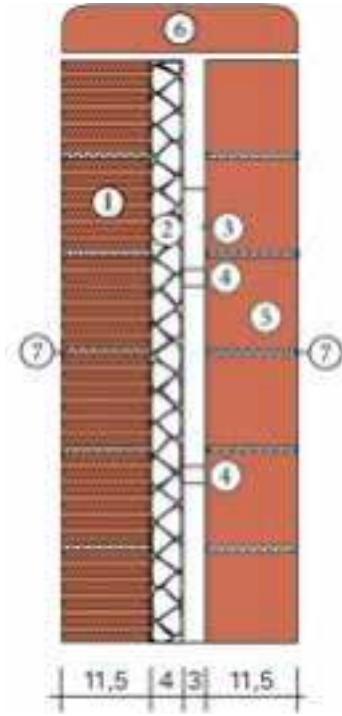

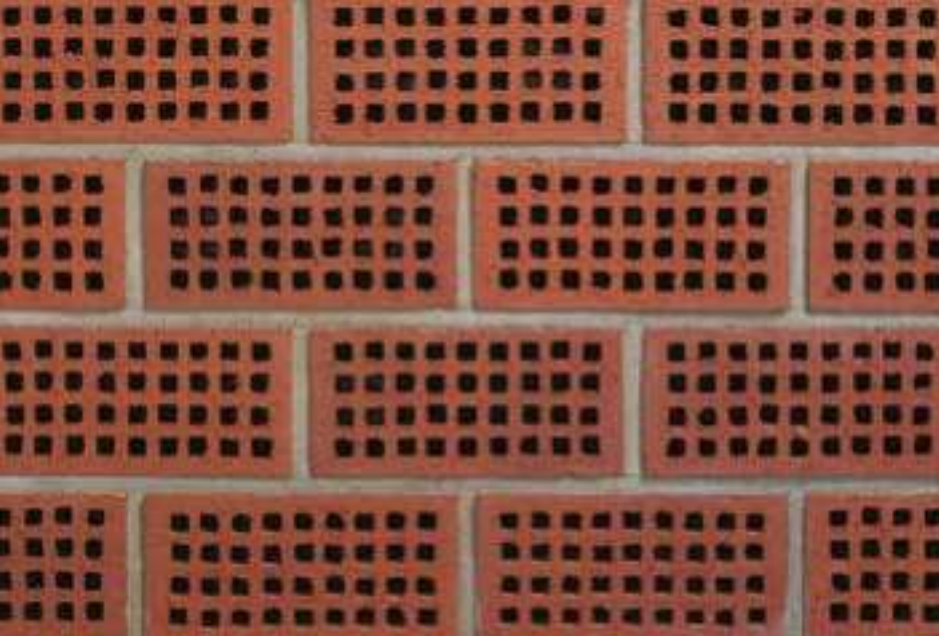

Thanks to the extremely high firing temperatures during the manufacturing process, ABC clinker facing bricks have a surface that reliably prevents the ingress of moisture of all kinds – that goes for both rain and paint. This means that graffiti remains on the surface and can be removed quickly and easily with the ABC graffiti remover, and what’s more, without leading residues. A façade with clinker facing bricks is not only beautiful and functional, but also robust and impervious.

Our sound-absorbing bricks absorb noise in accordance with DIN 52212 and are excellently suited for constructing a noise barrier in accordance with DIN 4109.

A noise barrier according to DIN 4109 consists of four layers: the first layer of sound-absorbing bricks facing the street with a hole percentage of about 30%, followed by a mineral fibreboard, 40–60 mm thick, and an air layer, as layers two and three.

The soundproofing brick in the double thin format can be combined with facing on the rear side in the double thin, normal and thin formats. Sound absorption coefficient in accordance with DIN 52212; resistance to stone impact of bricks for noise barriers in accordance with the Additional Technical Contractual Terms and Guidelines for Noise Barriers on Streets 8 (ZTV-Lsw 8).

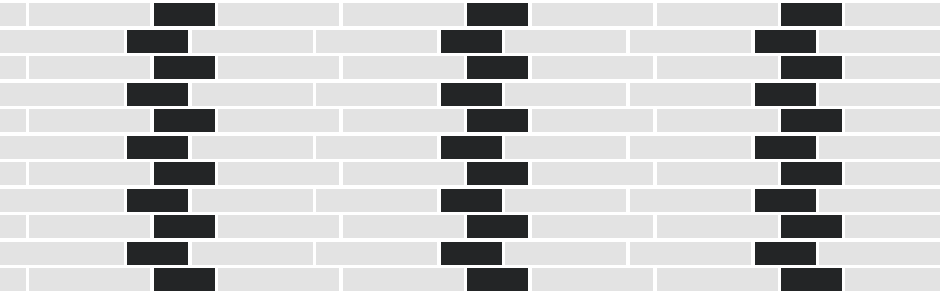

- 1 Sound-absorbing bricks in accordance with DIN EN 771-1, Double thin/normal/thin formats, red
- 2 Mineral fibreboard ISOVER Spahn 100 Si
- 3 30 mm air layer
- 4 Spacer
- 5 Rear-side facing as solid bricks in accordance with DIN EN 771-1, double thin/normal/thin formats
- 6 Brick covering in accordance with DIN EN 771-1
- 7 Mortar

Formats and bricks

AQUATERRA BRICKS

If water is added to the clay mass, it becomes soft and formable. This results in a smooth water-clay mixture from which our bricks are carefully brushed. The interplay between liquid and solid creates the characteristic and visual soft surface of our aquaterra series.

EXTRUDED CLINKER

With extruded clinkers, the clay mass is pressed with great pressure to form an extrusion from which the blanks are cut off. In this way, this manufacturing process produces rather smooth, uniform clinkers. Depending on whether an additional surface effect is desired, the strand is sanded, grained or peeled.

WATERSTRUCK BRICKS

In the production of waterstruck bricks, the clay mass is filled into a form, pressed, and then brushed out of the form with the help of water. Water serves as a separating element - thus the name for this production method, to which we owe our unique Manufacta® facing bricks. This gives the bricks a water-brushed surface with an individual, partially roughened appearance.

If the format you are looking for is not listed, please do not hesitate to contact us. We also produce customised products. We ask for your understanding that we require a certain order volume for such productions.
